

Mitja Benedičič, MD, PhD is a Slovenian neurosurgeon with a special interest in functional neurosurgery and neuromodulation. He is part of a dedicated multi-disciplinary team of experts working in the fields of stereotactic neurosurgery, with special emphasis on deep brain stimulation, as well as intrathecal drug delivery and spinal cord stimulation. He has helped to introduce the technique of spinal cord stimulation in Slovenia as well as several other European countries and is currently working at the country's largest neurosurgical center for functional and stereotactic neurosurgery.
